I am in favor of the proposed regulation. However, in order to ensure equal access to the public communication infrastructure, it is necessary to provide the companies with the opportunity of bringing immediate and direct benefits to their customers. A deep study should be performed by experienced professionals, in order to reveal the actual savings that using the public structure would bring to the private companies. It should be mandatory that the companies accept to extend the savings to their existing and future customers. As an example, if a given company becomes able, through the new regulation, to save 20% in operational costs, then all its clients should receive a permanent discount of

20% in their cable/internet bill. Companies that refuse to be part of such a social compromise would automatically lose the rights associated with the resolution.
